DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10 October 2006 has been entered.

Election/Restrictions

2. Claims 1-6, 8 and 10-11 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 17 April 2006.

3. Applicant requests that the withdrawn claims be rejoined. On allowance of a generic claim, the examiner will rejoin the withdrawn claims.

Claim Objections

4. Claims 7, 9 and 16-21 are objected to because of the following informalities: Claim 7 limits the compound to a "hetercyclic" compound. It should be "heterocyclic". Appropriate correction is required.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 3723

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 7, 9, and 16-21 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Nishimoto et al, 6,383,240. See column 2, lines 43 through column 3, lines 20 and column 5, lines 9-49. Note that peracetic acid, perbenzoic acid are 5 or 6 member heterocycle compounds and meet the limitations of claim 17.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

9. Claims 12-15, as broadly limited, are rejected under 35 U.S.C. 103(a) as being unpatentable over Nishimoto et al, 6,383,240. '240 does not explicitly disclose the proportion of inorganic to organic particles, or the average diameter range of the

particles. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have made the particles of a size or concentration desired, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233. Here, applicant has not provided any evidence of criticality of the ranges claimed. It is the examiner's position that one of ordinary skill in the art would recognize the desirability of making the proportion of inorganic to organic particles, and particle size, of any value that would work to polish the material being processed.

Response to Arguments

10. Applicant's arguments filed 10 October 2006 have been fully considered but they are not persuasive. Applicant argues that '240 does not disclose the claimed particles, or the heterocyclic compound. The examiner disagrees. '240, column 2, lines 43 through column 3, lines 20 discusses using both simple particles comprising at least one selected from the group consisting of inorganic particles and organic particles; and composite particles, obtained by integrally combining organic particles with inorganic particles. Further, '240 teaches using a heterocyclic compound, as well as an organic acid, see column 5, lines 9-49.
